2017 was an impressive year for the IGBT power module market, as it grew 18.1% compared to 2016. And so far, the perspectives for 2018 are even better, with over 20% growth in the first half of the year. The main explanation of this drastic market explosion is the boost from the electrical and hybrid electric vehicle (EV/HEV) sector, especially in China. It has also been an exceptional year for industrial motor drives in Asia.

Other device modules, like those based on MOSFETs and bipolar transistors, show a slight decrease. Consequently the overall power module market value ended at $3.54B, growing 11.3% year-on-year. By 2023 the market is expected to be over $5.5B. This promising market is beneficial for the packaging material business that Yole Développement (Yole) covers in this report, “Power Module Packaging 2018”.

The power module packaging material business is worth $1.2B, a little more than a third of the total power module market. It is a very dynamic market, where continuous innovations and material enhancements and a lot of R&D investment are needed. This power module packaging material market’s compound annual growth rate (CAGR) 2017-2023 will be 8.2%, coming close to a $2B business opportunity by 2023.

In terms of technology, the report takes a deep look into substrates, baseplates, die-attach, substrate-attach, encapsulation, interconnections and thermal interface material (TIM) markets. Almost 50% of the current $1.2B market value is substrates and baseplates. Another 25% of that market is exclusively from die-attach and substrate attach materials. Major technological choice trends in these segments can therefore rapidly impact the power module packaging overall market.

For instance, the penetration of silver sintering as a die-attach technology is increasing among the industry, and even arriving in some EV/HEV power modules. As this technology is more expensive, the CAGR 2017-2023 for the die-attach market is 11%, much higher than for the other market segments.

The second highest CAGR 2017-2023 is for interconnections, at 9.5%. This is because new interconnection technologies, like flexible interconnection foils, are more costly compared to more cost-effective but less reliable aluminum wire-bonding. The other major technological change that will impact the global market will be an increasing use of silicon nitride (Si3N4) active metal brazing (AMB), which will capture 37% of the power module substrate market by 2023. As the demand for Si3N4 increases, its high cost is expected to decrease faster than the other ceramic materials.
Technical trends in power module packaging are mainly driven by the entrance of the Wide Band Gap (WBG) materials and the challenging system requirements of the booming EV/HEV industry. Indeed, the introduction of the WBG semiconductors SiC and GaN is pushing the development of new power packaging solutions, as these devices can work at higher junction temperatures and higher switching frequencies with smaller die sizes.

In order to take advantages of SiC’s properties, reliable and robust die attach technologies that work at 200 °C are required. Silver sintering is today the big star for SiC power modules, due to its high melting temperature point, exceeding 900°C. In term of substrates, high thermal conductivity materials will be chosen such as AlN and Si3N4, as dies need to dissipate the losses from a smaller surface. In addition, the interconnection technology is a key factor for the good performance of SiC devices. Many companies are therefore developing their own low-stray inductance interconnections such as GE’s Power Over Lay (POL) or Semikron’s SKiN technology.

The EV/HEV industry’s demanding requirements for high power density and mechatronics integration are driving many of the other power packaging innovations. Today, there are two clear trends: over-molded double-side cooled modules for hybrid cars and single-side cooled modules with pin-fin baseplates for battery-only electric cars.

This report summarizes other tendencies such as the use of organic insulator foils in insulated metal substrates (IMS) and the “integrated substrates” that merge a ceramic substrate and a pin-fin baseplate. With all these new technologies, the EV/HEV power packaging landscape is fast-evolving and dynamic. That is why Yole follows the leading packaging material suppliers like DOWA, Denka, Rogers and Alpha, and the module manufacturers like Bosch, Mitsubishi Electric and Semikron, very closely to quickly understand their future technology innovations.

Example of STMicroelectronics’ SiC MOSFETs modules in Tesla’s Model 3

* Extracted from System Plus Consulting report: Tesla Model 3 Inverter with SiC Power Module from STMicroelectronics, June 2018

NEW CHAPTERS: A WBG PACKAGING - TESLA’S MODEL 3 POWER MODULES - MITSUBISHI ELECTRIC’S J1 SERIES INNOVATIVE INTEGRATED SUBSTRATES

The Power Module Packaging 2018 report has several new features, including an entire chapter which focuses on WBG module packaging challenges, innovations and future trends. Yole has also introduced the TIM market and its forecasts as part of the power module packaging market, building on the 2017 report, where just the different TIM technologies were described. Yole’s analysts have also now analyzed the Transient Liquid Phase Soldering (TLPS) technology as a future alternative to die-attach.

An exciting, fresh, case study explores Tesla’s Model 3 power module, which has been manufactured by STMicroelectronics and reverse engineered by System Plus Consulting. Similarly, photos and an explanation of Mitsubishi Electric’s J1-series power module, with its very innovative integrated ceramic and baseplate pin-fin substrate design secrets. The Power Module Packaging 2018 report will bring you all these latest innovations and much more.
COMPANIES CITED IN THE REPORT (non exhaustive list)

Hong NEC, Shin Etsu, Siemens, Starpower, STATS ChipPAC, STMicroelectronics, Texas Instruments, Toshiba, Toyota, Valeo, Vincotech, Wacker, and more.

Dr. Milan Rosina and Mattin Grao Txapartegi co-authored the Power module packaging 2018: Material market trends and technology trends report.

AUTHORS

As analysts within the Power & Wireless division at Yole Développement (Yole) Alejandra Fuentes Suarez, Dr. Milan Rosina and Mattin Grao Txapartegi co-authored the Power module packaging 2018: Material market and technology trends report.

Dr. Milan Rosina has 20 years of scientific, industrial and managerial experience involving equipment and process development, due diligence, technology, and market surveys in the fields of renewable energies, EV/HEV, energy storage, batteries, power electronics, thermal management, and innovative materials. He previously worked for the Institute of Electrical Engineering in Slovakia, Centrotherm (Germany), Fraunhofer IWS (Germany), CEA LETI in France, and utility company ENGIE in France. Dr. Rosina received his Ph.D. degree from the National Polytechnical Institute (Grenoble, France).

Mattin Grao Txapartegi investigates power packaging solutions to analyze the latest technical challenges, market growth and competitive landscape. Getting a deep understanding of the technology evolution, the market trends and the strategies of each player are part of his mission at Yole. Previously he acquired a comprehensive expertise in the design of power converters for EV at Renault (France). As an engineer, Mattin graduated from Grenoble INP (FR) with specialization in embedded systems for transportation. He has also an advanced master in aeronautics from the Arts & Métiers ParisTech (FR).

Alejandra Fuentes Suarez daily researches the latest developments in power converter topologies, passive components, power modules packaging and EV/HEV. Previously Alejandra acquired extensive expertise in the design of power converters for solar, wind, hydro and motor drive applications at Semikron (France). Alejandra graduated from UJF (Grenoble, FR) and INP (Grenoble, FR) as an electrical engineer, specializing in design of power electronics system. She also holds an advanced master’s in the field of Marketing and Management of Energy from the Grenoble Business School (Grenoble, FR).

OBJECTIVES OF THE REPORT

- Highlight power module packaging market analysis and forecasts
- Provide a deep insight into state-of-the-art package designs and materials
- Describe the current packaging challenges for SiC and GaN Wide Band Gap devices
- Identify the key technology trends that will shape the market in the future
- Understand the main challenges and proposed innovations
- Deliver supply chain analysis and trends

ABOUT YOLE DEVELOPPEMENT

Founded in 1998, Yole Développement has grown to become a group of companies providing marketing, technology and strategy consulting, media and corporate finance services, reverse engineering and reverse costing services and well as IP and patent analysis. With a strong focus on emerging applications using silicon and/or micro manufacturing, the Yole group of companies has expanded to include more than 80 collaborators worldwide covering MEMS and image sensors, Compound Semiconductors, RF Electronics, Solid-state lighting, Displays, Software, Optoelectronics, Microfluidics & Medical, Advanced Packaging, Manufacturing, Nanomaterials, Power Electronics and Batteries & Energy Management.

The "More than Moore” market research, technology and strategy consulting company Yole Développement, along with its partners System Plus Consulting, PISEO and KnowMade, support industrial companies, investors and R&D organizations worldwide to help them understand markets and follow technology trends to grow their business.

CONSULTING AND ANALYSIS
• Market data & research, marketing analysis
• Technology analysis
• Strategy consulting
• Reverse engineering & costing
• Patent analysis
• Design and characterization of innovative optical systems
• Financial services (due diligence, M&A with our partner)
More information on www.yole.fr

MEDIA & EVENTS
• i-Micronews.com website & related @Micronews e-newsletter
• Communication & webcast services
• Events: TechDays, forums...
More information on www.i-micronews.com

REPORTS
• Market & technology reports
• Patent investigation and patent infringement risk analysis
• Teardowns & reverse costing analysis
• Cost simulation tool
More information on www.i-micronews.com/reports

CONTACTS
For more information about :
• Consulting & Financial Services: Jean-Christophe Eloy (eloy@yole.fr)
• Reports: David Jourdan (jourdan@yole.fr) Yole Group of Companies
• Press Relations & Corporate Communication: Sandrine Leroy (leroy@yole.fr)
Definitions: “Acceptance”: Action by which the Buyer accepts the terms and conditions of sale in their entirety. It is done by signing the purchase order which mentions “I hereby accept Yole Developpement’s Conditions of Sale”.

“Buyer”: Any business user (i.e. any person acting in the course of its business activities, for its business needs) entering into the following general conditions to the exclusion of consumers acting in their personal, family or non-commercial interest.

“Contracting Parties” or “Parties”: The Seller on the one hand and the Buyer on the other hand.

“Intellectual Property Rights” (“IPR”) means any right, title and interest, including patents, trademarks, registered designs, copyrighted documents, trade names and trade secrets, copyrights, trademarks, registered models, designs, copyrights, inventions, commercial secrets and know-how, technical information, company or trading names and any other intellectual property right protected by any law, and not the fact that they have been registered or not and including any pending registration of one of the above mentioned rights.

“License”: For the reports and databases, 3 different licenses are proposed. The buyer has to choose one license:
• One user license: one person at the company can use the report.
• Multi-user license: the report can be used by unlimited users within the company. Subsidiaries and Joint-Ventures are not included.
• Corporate license: purchased under “Annual Subscription” reports and databases can be used by any person within the company. Joint-Ventures are not included.

“Products”: Depending on the purchase order, reports or databases on MEMS, CSC, Optics/MEMS, Nano, bio... to be delivered to the Buyer under an annual subscription (i.e. subscription for a period of 12 calendar months). The annual subscription to a package (i.e. a global discount based on a company order) is delivered to the Buyer ordered by the Seller within 8 days from the date of the Products. The price may be reevaluated from time to time. The effective price is deemed to be the one applicable at the time of the order.

2.1 Products are sent by email to the Buyer:
• within 30 days from the date of the order, if the Product’s electronic delivery format within 90 days from the date of the original download or receipt of the Product.

2.2 Yole may offer a pre release discount for the companies willing to accept the indicative release date. The price may be reevaluated from time to time. The effective price is deemed to be the one applicable at the time of the order.

3. PRICE, INVOICING AND PAYMENT
3.1 Prices are given in the orders corresponding to each Product sold on a unit basis or corresponding to annual subscriptions. They are exclusive of taxes. The Seller will provide the Buyer with an invoice. The price may be reevaluated from time to time. The effective price is deemed to be the one applicable at the time of the order.

3.2 Payments due by the Buyer shall be sent by cheque payable to Yole Développement, credit card or by electronic transfer to the following account:

HSBC
1, place de la Bourse 69002 Lyon France
Bank code: 30556
Branch code: 01070 14568 87
BIC or SWIFT code: CCGFRPP
IBAN: FR76 3005 6001 7001 7020 0156 587
To ensure payment has been made, the Buyer shall request the right to receive down payments from the Buyer. In this case, the due of new payments will be mentioned on the order.

3.3 Payment is due within the 30 days from the seller within 30 days from invoice date, except in the case of a particular written agreement. If the Buyer fails to pay within this time and fails to contact the Seller, the latter shall be entitled to invoke interest in arrears based on the annual rate Refi of the «BCE» + 7 points, in accordance with article L. 441-6 of the French Commercial Code. The Buyer shall be entitled to receive the Products and for the use and interpretations he makes of the documents it purchases, of the results he obtains, and of the business activities, shall be solely responsible for choosing the products, and for the use and interpretations he makes of the documents it purchases, of the results he obtains, and of the advice and acts it deduces thereof.

4. Liabilities
4.1 The Seller shall only be liable for (i) direct and (ii) foreseeable pecuniary damages only, corresponding to the Products or arising from a material breach of this agreement.
4.2 In no event shall the seller be liable for:
• damages of any kind, including without limitation, incidental or consequential damages (including, but not limited to, damages for loss of profits, business interruption and loss of programs or data) arising from the use by the Buyer or inability to use the Seller’s website or the Products, or any information provided on the website, or in the Products;
• any accuracy, completeness, adequacy or reliability of such information, which cannot be guaranteed to be free from errors;
• all the contents and services, the Seller sells may, upon prior notice to the Buyer from time to time be modified by or substituted with similar Products meeting the needs of the Buyer. This modification may result in the absence of liability of the Seller or others, in which case the Seller ensures the substituted Product is similar to the Product initially ordered.
4.3 The deadlines that the Seller is asked to state for the mailing of the Products are given for information only and are not guaranteed. The Seller shall not be held liable for any damages or cancellations of the orders, except for non acceptable delays exceeding [4] months from the stated deadline, without information from the Seller. In such case only, the Buyer shall be entitled to ask for a reimbursement of the sendo of the Products. In case of damages, the Seller cannot guarantee that any Product will be free from infection.

5. FORCE MAJEURE
5.1 The Seller shall not be liable for any delay in delivery, performance in a correct manner or in accordance with the terms and conditions of sale caused by acts of nature, fire, accident, war, government intervention, embargos, strikes, labor difficulties, equipment failure, late deliveries by suppliers or other difficulties which are beyond the control, and not the fault of the Seller.

6. PROTECTION OF THE SELLER’S IPR
6.1 All the IPR attached to the Products are and remain the property of the Seller.

7. TERMINATION
7.1 If the Buyer cancels the order in whole or in part or postpones the date of mailing, the Buyer shall indemnify the Seller for the entire costs that have been incurred as at the date of notification by the Buyer of such delay or cancellation. This may also apply for any other direct or indirect consequential consequences thereof.

7.2 In the event of breach by one Party under these conditions or the order, the non-breaching Party may send a notification to the other by recorded delivery letter upon which, after a period of thirty days (30) days having elapsed, if the problem, the non-breaching Party shall be entitled to terminate all the pending orders, without being liable for any compensation.

8. MISCELLANEOUS

9.2 French law shall govern the relation between the Buyer and the Seller, is deemed to have accepted the latest version of these terms and conditions, providing they are communicated to him in due time.

9.1 Any dispute arising out or linked to these Terms and Conditions shall be settled by the French Commercial Courts of Lyon, which shall have exclusive jurisdiction upon such issues.

9.3 French law shall govern the relation between the Buyer and the Seller, in accordance with these Terms and Conditions.
